

# The revolution behind V2 Beauty Booster

OFFER YOUR PATIENTS THE LATEST ADVANCEMENT IN AESTHETICS WITH THE BREAKTHROUGH V2 BEAUTY BOOSTER, REINVENTING THE TREATMENT OF SKIN.

**T**he V2 Beauty Booster treatment is a new, game-changing advancement in aesthetics, revolutionising the way we treat skin.

Distributed by Mondeal Aesthetics, the V2 injector gun delivers the V2 Beauty Booster treatment with Teosyal Redensity [I] into the skin.

Treatment is a completely customisable with a wide range of applications to target dehydrated skin, fine lines and wrinkles. It can be used to achieve tighter, firmer skin on the face, lower eyelid, forehead, neck, décolletage and hands.

## The V2 injector gun

The V2 injector gun is a delivery device that allows the practitioner to place the Beauty Booster with Redensity [I] reliably beneath the skin. It offers precise depth and accurate dosing for a quick and effective treatment with minimal pain and downtime for patients.

The V2 injector gun can be used with multi-needles – the nine-point for the face and five-point for areas such as the hands. This increases the speed of the procedure and decreases the sensation relative to single needles, as patients do not perceive the multiple points.

The device works by applying inbuilt suction to the skin prior to every injection. This decreases the sensation and vascularity in the area, improving comfort and the accuracy of the depth delivery, ensuring a more uniform treatment.

In addition to use on the face, the V2 injector gun can also be used on the neck, which can be a difficult area to treat with success.

## Teosyal Redensity [I]

Teosyal PureSense Redensity [I] is a unique hyaluronic acid that hydrates and repairs the skin – a new concept known as Beauty Booster.

Redensity [I] can be injected into the papillary dermis across the entire face.

Teosyal Redensity [I] is non cross-linked HA that includes a unique patented formula of effective natural components (amino acids, antioxidants, minerals and vitamins). This combination helps optimise DNA synthesis and stimulate collagen production. With pharmaceutical-grade hypoallergenic properties, these ingredients have the ability to assist in dermal restructuring.

Redensity [I] integrates into the papillary dermis, nourishing and treating the skin and allowing the fibroblasts to lay down new collagen and elastin. Unlike cross-linked fillers, Redensity [I] will not leave tiny lumps of HA under the skin (which can take up to 12 months to disappear).

The lightness of the gel, exerting low pressure in the tissue, also contributes to a low incidence of swelling.

Treatment should be viewed as more regenerative and ongoing in nature. Fibroblasts within the papillary dermis will be activated to lay down new collagen and elastin, resulting in a thicker and more elastic dermis. These results should remain for at least 12 months post treatment before the effects of ageing are once again seen.

The results are visibly lighter, smoother, and softer skin after a few treatments. The effects are subtle and natural looking.

On average, patients should experience minimal downtime. Some patients may have bruising and blotchiness post treatment, which will usually settle after four days. Downtime is reduced after each subsequent treatment of Redensity [I] due to the dermis being repaired.

The Beauty Booster treatment encompasses a range of benefits – from its ease of use and flexibility of treatment to its minimal downtime. The V2 injector gun can benefit any practice that already performs any type of skin needling or dermal filler treatment. It is a quick and effective way to improve skin tone and texture.

The V2 Beauty Booster represents a unique advancement in aesthetics and has become the skin treatment of choice for many practitioners, achieving optimal results that ultimately lead to happy and satisfied patients. **AMP**

### V2 Beauty Booster treatment protocol

The objective is to completely blanket the face with hydrating hyaluronic acid, creating a beautiful glow for the patient. To do so, the face is divided into thirds, with 33 injections in each third. The treatment protocol is as follows:

- Three treatments of Teosyal Redensity [I] (3ml), with three to four weeks between treatments
- Topical anaesthetic is optional
- Prep with Teoxane RHA™ Micellar Solution
- Post-treatment apply Teoxane Cosmeceuticals Post Procedure and Oxygenetix Foundation
- Between treatments patient to use Teoxane Cosmeceuticals Deep Repair Balm for three to five days post treatment for protection

At every treatment the patient will receive 3ml of Redensity [I] HA, which will hydrate and repair the skin. After the full treatment, the patient will have had 9ml of Redensity [I] injected into the papillary dermis. Fibroblasts will be activated, promoting new collagen and elastin in the skin and delivering healthy looking, hydrated skin.

If you do decide your patient requires moderate volume, Redensity [III] is an ideal choice as it is semi cross-linked and therefore more forgiving than a fully cross-linked product. You would use it on the lower third of the face at a depth of approximately 1.6 to 1.8mm and follow up with Redensity [I] treatments for the second and third treatments.

Clinicians following the prescribed protocol can be assured of optimal patient satisfaction. After the initial three treatments the patient should present at six-monthly intervals for an additional treatment to ensure radiant, healthy skin.

# What doctors are saying about the V2 INJECTOR

GAME CHANGER FOR SKIN

“The V2 Injector has revolutionised how we place filler in the skin level, essentially for the promotion of healthy, glowing and firmer skin. V2 Injector allows precision of the amount of product used, as well as the depth of the product used, which is extremely important to me for an optimal outcome. This, together with Redensity [I], being a very fine HA with a dermal complex, improves the luminance, integrity and structure of the skin. It is my number one go-to treatment regimen and product for skin management.”

– **Dr Steven Liew**, Shape Clinic in NSW

“The precise delivery of hyaluronic acid into the dermis provides a predictable method of improving crepiness and fine lines of facial skin. The benefit is long lasting with little downtime.”

– **Dr Ian Carlisle**, Cabrini Medical Centre in Victoria

“The V2 Injector is an excellent piece of equipment that enables you to safely and effectively deliver Redensity [I] to the superficial dermis, which doesn't result in downtime to the patient and produces the added results of hydrated skin, minimisation of fine lines and a fabulous “glow”. Patients love the results.”

– **Dr Ellen Selkon**, Clinic 42 in New Zealand

“I'm very happy with the results I am achieving with the V2 Injector and Redensity [I]. Combining CIT (needling) with the introduction of antioxidants, amino acids, copper, zinc and HA intradermally is such an obvious step forward in skin treatments. Over the years I've tried a number of intradermal products claiming to improve skin quality. This is the first time I've been confident enough in the results to introduce it into my practice.”

– **Dr Teresa Cattin**, Faceworks in New Zealand

“The use of the gun means that treatments can be delegated to nursing staff, safe in the knowledge that the dose and depth per “shot” has been prescribed and can be accurately followed by a relatively-inexperienced staff member. The dose and depth can be varied among different individuals with varying skin thicknesses, textures and requirements, as well as among different areas on the same individual.”

– **Dr Mary Dingley**, Cosmetic Medicine Centre in QLD

“The V2 injector gun can safely be used on any area of the face, neck & décolletage, even treating the delicate under eyelid skin. As it allows me to adjust the depth, dosage, speed and vacuum, I can safely, effectively and evenly distribute the product within a short

amount of time, without product wastage and client downtime.”

– **Dr Lee Lua**, B Clinic Medical Cosmetic Bar in QLD

“Patients are amazed at the comfort of the treatment and the early results are promising. The V2 injector gun can be used by any person qualified and trained to inject S4 fillers. It helps to eliminate uneven placement of products giving a more uniform treatment by all injecting staff in the clinic.”

– **Dr Eddie Roos**, Cosmetic Elegance Clinic in QLD

“My Redensity [I] practice would not have existed without the ability to deliver the product in a fast, effective and consistent manner using the V2 injector gun. I was reluctant to try both Redensity [I] and the V2 injector initially, as I had had poor results using other hyaluronones injected manually into the superficial dermal layers. Once I had trialled the product and gun on patients, received their feedback and saw the results, I knew that this was going to be an important component of my cosmetic practice.”

– **Dr Garsing Wong**, Sapphire Appearance Medicine Clinic in Auckland, NZ

“I think any practice that already performs any type of skin needling or dermal fillers would benefit from adding the V2 gun to their range

“I think any practice that already performs any type of skin needling or dermal fillers would benefit from adding the V2 gun to their range of treatments. It is simple and quick to perform, requires minimal preparation and can benefit anybody who wants to improve their skin tone or texture. It is very popular in Europe and Asia and word is spreading in Australia.”

– **Dr Jenny Kimmins**, Southern Cosmetics in Victoria

“The V2 Injector gun automates something that would be very laborious and very difficult to do manually. It allows the practitioner to place a dermal filler reliably 1mm or less beneath the skin and to do so consistently hundreds of times with a very precise volume. A couple of days after the procedure, patients often describe their skin texture looking better. By week six, new collagen Type 1 forms and the skin is measurably better in its structure and appearance.”

– **Dr Mariusz Gajewski**, Star Cosmetic Medicine in NSW

“The treatment ultimately creates firmer, stronger and glowing skin. As an operator of the V2, we can be assured of the correct depth and dosage into the papillary dermis, providing a perfect environment for the new collagen and elastin production.”

– **Dr Peter Bakaric**, Collagen Face Centre in NSW

“The results speak for themselves. Everybody wants brighter, stronger skin and now we have a product and a device to deliver this to them with minimal downtime and pain. There is certainly no other product on the market that both hydrates and nourishes the skin the way that Redensity [I] does. The only way to deliver this directly into the dermis is with the V2 injector gun. So for the first time we have been able to simulate up-regulation of dermal cells.”

– **Dr Sean Arendse**, Flawless Rejuvenation Clinic in Victoria

## Teoxane Cosmeceuticals

The V2 Beauty Booster treatment is best used in combination with Teoxane Cosmeceuticals. Created specifically for use by doctors, this impressive skincare range exhibits soothing and healing ingredients to help initiate and optimise the recovery process.

All Teoxane products contain Resilient Hyaluronic Acid (RHA), which provides the optimal hydration to strengthen, protect and plump the skin. RHA hydrates by forming a strong barrier on the skin's surface and locking in moisture, allowing gradual release of the active ingredients.

The Teoxane Micellar Solution can be used in-clinic for skin preparation before the procedure. Plus, for the patient, it offers a 3-in-1 action – cleanser, toner and makeup remover.

The Teoxane Post Procedure Fluid is designed to calm and restore the skin after an aesthetic treatment. The delicate, irritated skin is soothed and protected while skin regeneration is enhanced to ensure quick recovery.

The Teoxane Deep Repair Balm complements the Post Procedure Fluid and can be given to the patient as a home prescription for post-procedure care.

## Oxygenetix

To camouflage post-procedure skin, Oxygenetix is a breathable foundation that can be applied directly to broken, post-laser and post-surgical skin and is suitable for use after V2 Injector treatments.

This breathable foundation is based on a patent-pending formula – Ceravitae Complex, designed to expedite connective tissue reconstruction, systemically build collagen layers and reinforce natural skin healing. This results in accelerated patient recovery and reduction in scar formation post invasive aesthetic procedures.
